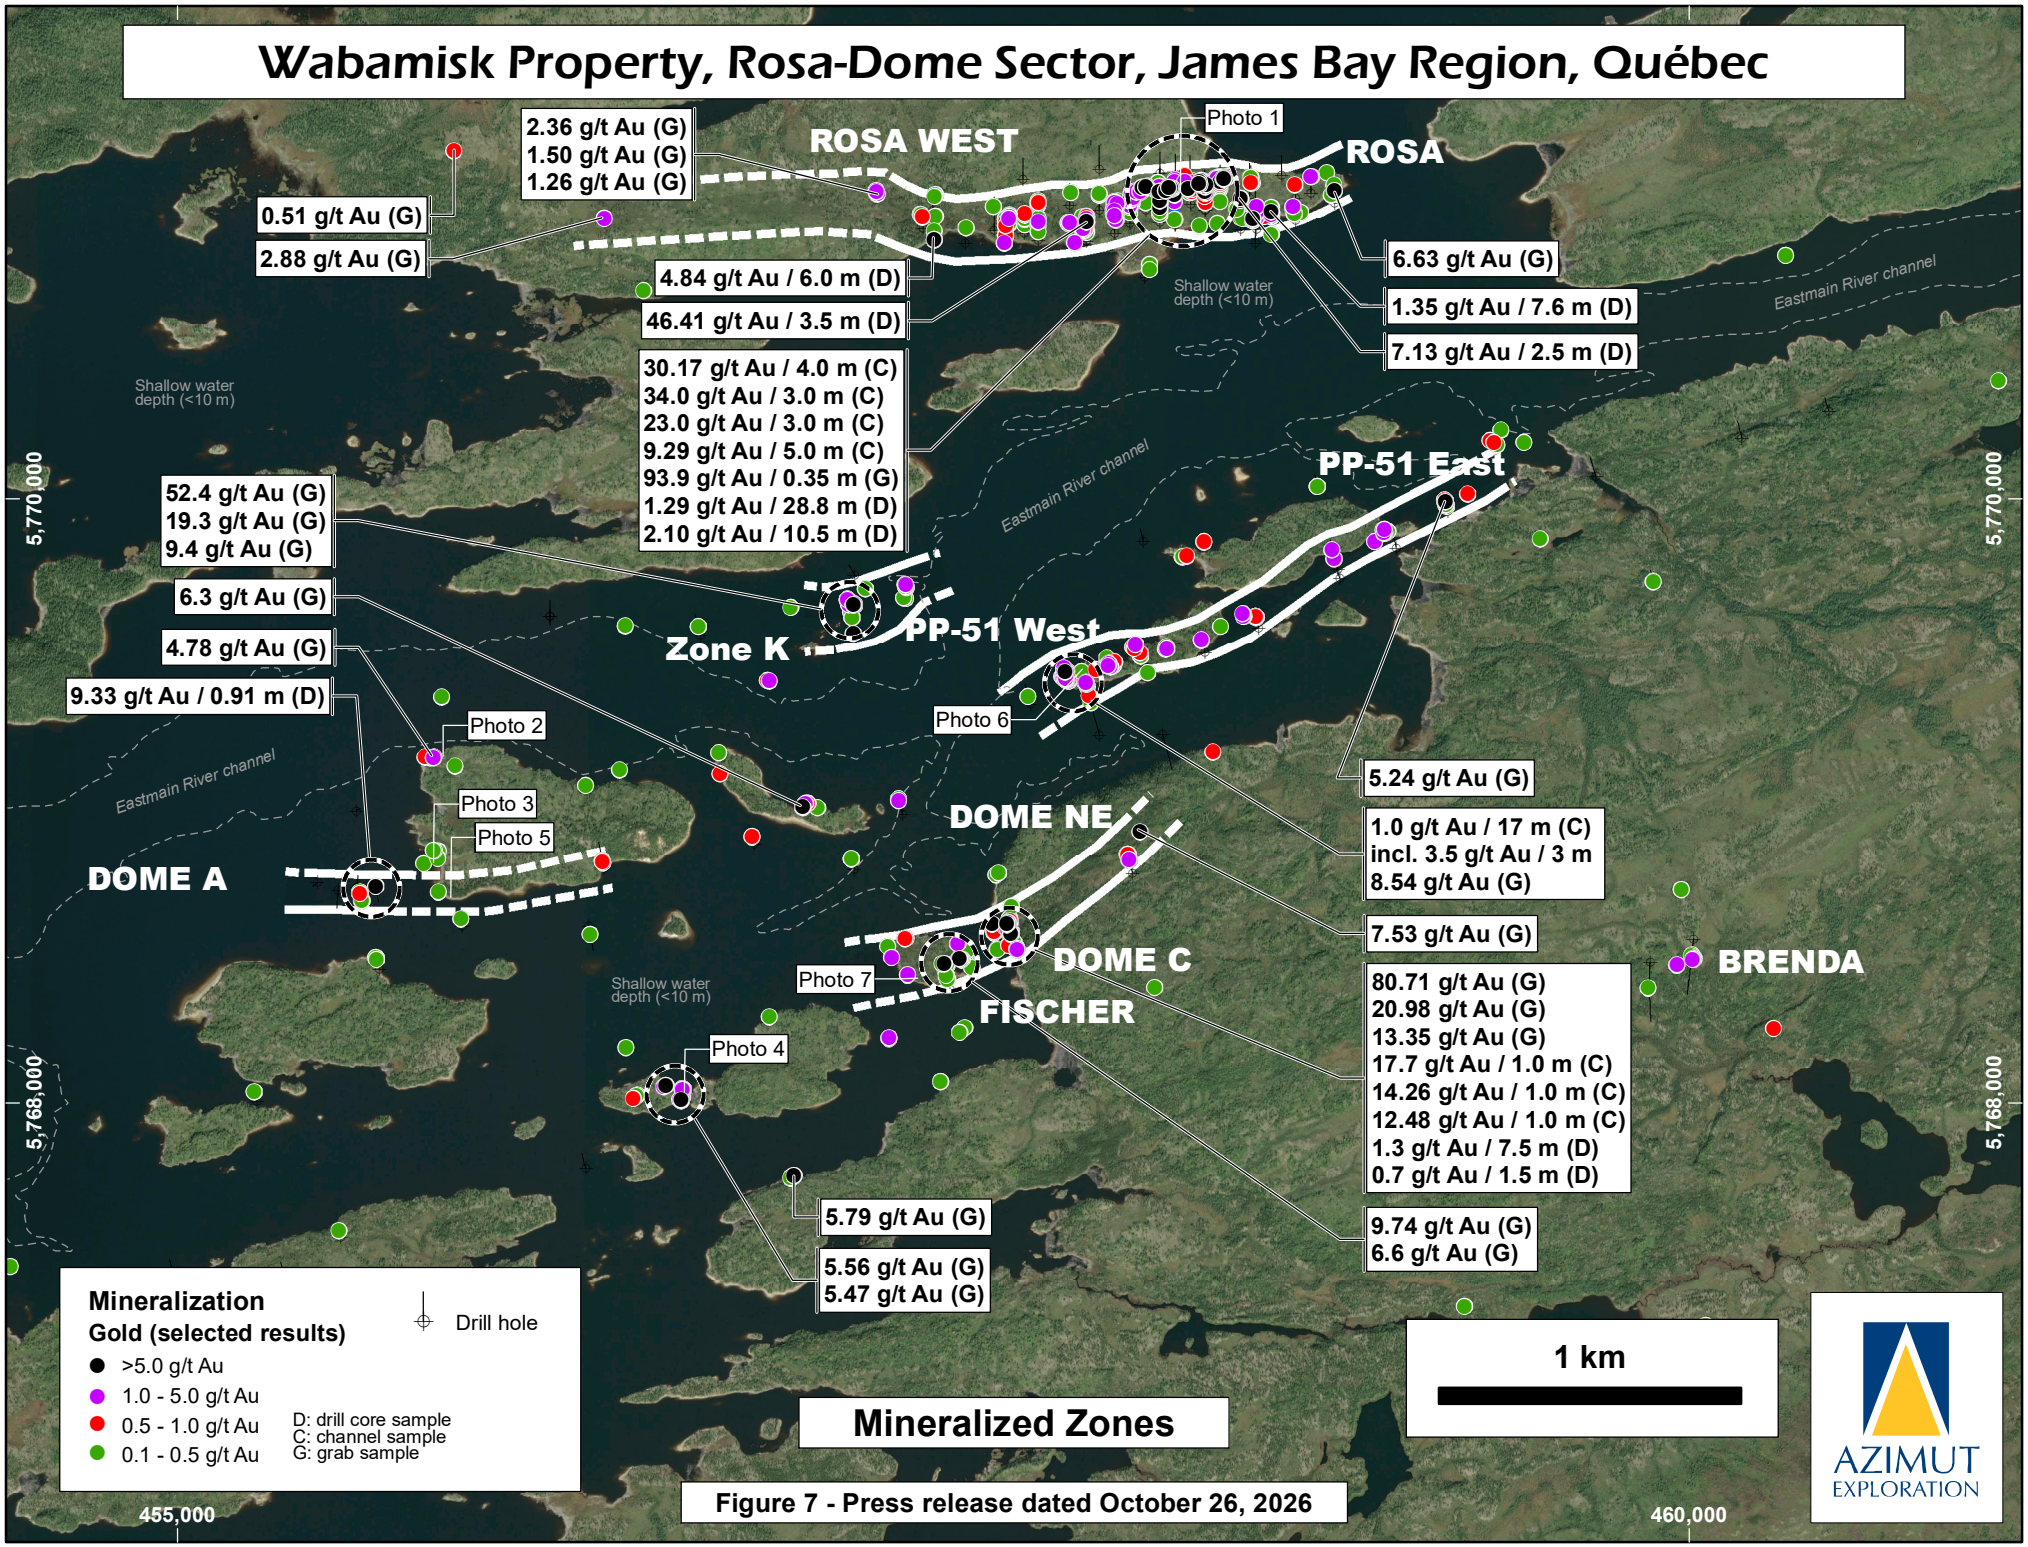

Figure 7 - Press release dated October 26, 2026

Wabamisk Property, Rosa-Dome Sector
James Bay Region, Québec (1/2)

Photo 1 – Hydrothermal breccia with tourmaline cement, minor sulphides (arsenopyrite, pyrrhotite, pyrite).

Photo 2 – Strongly mineralized outcrop with arsenopyrite (>30%), pyrite, chalcopyrite, quartz, iron carbonate, tourmaline, sericite.Up to **4.78 g/t Au** (grab sample).

Photo 3 – Outcrop with massive tourmaline.

Photo 4 – Outcrop with massive tourmaline, quartz veins, and arsenopyrite. Up to **5.56 g/t Au** (grab sample).

AZIMUT EXPLORATION

Photos - Press release dated October 26, 2026

Wabamisk Property, Rosa-Dome Sector
James Bay Region, Québec (2/2)

Photo 5 – **Livia Showing** – Silicified basalt with chalcopyrite stringers (pending results).

Photo 6 – **PP51-West Zone** – Silicified and sericitized sheared gabbro with arsenopyrite, pyrite and quartz veins (pending results).

Photo 7 – **Fischer Zone** – Quartz veins, tourmaline and iron carbonates with trace of arsenopyrite and pyrite within altered basalt (pending results).

Photo 8 – **Ginger showing** – Arsenopyrite and quartz veins hosted by metasediments. Up to **3.71 g/t Au** (grab sample).
